

# What is Persistent Search?

Published on 07/01/2016

During each login session, persistent search means that any search query will remain applied in the workspace unless it is cleared. For example, if you perform a search similar to the example below, navigate to another page, then return, the same search filter will still apply to the applicable workspace. To clear your search, hit the reset button to the right of the search bar.

Logged in as **Easy One** | Logout

**Projects Workspace** Workspace | Contacts | Tasks | Reports | Account | Help

**Project Organizer**  
[Create New Project](#)
